> EDUCATION

Parsons School of Design

Master of Fine Arts

Major: Design and Technology
Minor: Civic Service Design

09/2020 – 05/2023

- Interaction Design
- Web Design
- Experience Design
- Game Design
- Service Design
- Creative Coding
- Graphic Design
- Motion Graphics
- Data Visualization
- Public Space

University of Glasgow

Bachelor of Engineering (Hons)

Major: Electronic and Electrical Engineering

09/2016 – 06/2020

- Embedded Processor
- Circuit Design
- Project Management & Finance
- New Product Creation and Business Plan

> SKILLS & TOOLS

Graphic Design & Illustration

- Photoshop
- Illustrator
- InDesign
- Procreate
- Canva
- PowerPoint

UI/UX & Web Design

- User-centered Design
- User Research
- XD
- Figma
- Sketch
- HTML/CSS
- p5.js
- SharePoint
- WordPress
- Claude Code
- Codex
- MCP
- Google Stitch
- Vibe Coding

Video Editing & Motion Graphics

- Premiere Pro
- After Effects
- Final Cut Pro

3D Modeling

- Cinema 4D
- Blender
- Rhinoceros

Data Visualization

- Tableau
- PowerBI
- Python
- Excel

Game & Interactive Design

- Unity3D
- Arduino
- Touch Designer
- C#

> RECENT EXPERIENCE

AI Product Design Lead, Founding Member

07/2024 – Present

Bytey

- Lead product design across mobile and web, translating research, UX strategy, and product goals into user flows, wireframes, high-fidelity prototypes, and polished interfaces.
- Own and evolve Bytey's design system, creating reusable components, interaction patterns, and documentation to support consistency, scalability, and efficient engineering handoff.
- Collaborate closely with engineers, artists, and cross-functional teammates to define core product features, refine the visual direction, and ship cohesive app and web experiences.
- Work within an AI-first product workflow, partnering with engineering to understand model behavior, identify edge cases and failure modes, and define system-level solutions that improve both AI performance and user experience.
- Design reusable UX patterns for AI interactions, including search, recommendations, feedback states, and agentic workflows, making complex model outputs clearer, more reliable, and easier to use.
- Build high-fidelity interactive prototypes and product-facing web experiences, including the ByteyAI web MVP, to accelerate iteration, user testing, and development handoff.
- Helped bring Bytey from 0 to 1, contributing to a product nominated for the UX Design Awards Spring 2026 in the Product category.

Website Visual Designer

11/2023 – 06/2024

The Ahmad Butler Foundation

- Entrusted with the pivotal role of leading the visual design and UX/UI development for the "IMillion Families March" campaign, a key initiative for childhood cancer awareness and fundraising.
- Conducted extensive research and field studies to understand the needs of the foundation, the expectations of clients, and the journey of end-users navigating the cause's digital presence.
- Orchestrated the design process from conceptual sketches to high-fidelity prototypes and built the design system, ensuring the website's visuals and usability align with the foundation's mission and user expectations.
- Leveraged a human-centered design approach to craft intuitive navigation and responsive interfaces for both mobile and desktop, from mapping out the user-flow to conducting user testing to gather insightful feedback, iteratively refining the flow and design to optimize for clarity, accessibility, and user interaction.
- Led the design team and collaborated closely with the developer and the foundation to ensure that design solutions are technically achievable, meet strategic objectives and foster a supportive online community.

Creative Technologist

10/2023 – 06/2024

Immersive Interactive Installation with "teamecho.studio"

- Played a pivotal role in the creation of "The Power Paradox" and "Echo", immersive interactive installations designed to engage audiences with themes of empowerment of diverse voices and critical thinking against misinformation, through exploration and play.
- Collaborated with a product manager, visual designer, and sound designer to conceptualize and develop the core ideas, ensuring the installations resonated deeply with audiences through interactive experiences.
- Crafted the installation with a hands-on approach, integrating various sensory inputs with Arduino and facilitating their seamless interaction with TouchDesigner and MadMapper to create immersive experiences. Took the lead on integrating physical computing elements, meticulously linking sensor data to visual outputs, providing users with real-time interactive feedback.
- Directed the design and development of the project's online presence, using Figma for UI/UX prototyping and employing HTML/CSS/JavaScript to bring the responsive web interface to life, hosted via GitHub Pages. Enhanced the platform with advanced creative coding techniques using @p5xjs, ensuring a dynamic and engaging user experience.
- Implemented cutting-edge SEO strategies and developed the site as a progressive web application (PWA) to ensure optimal accessibility and visibility. This approach not only improved user engagement but also mirrored the installation's interactive and creative nature, offering visitors a cohesive understanding of the project's intent and scope.

Adjunct Professor

08/2023 – 06/2024

Parsons School of Design

- Taught studio classes "Critical Computation Lab" for graduate and undergrad students.
- The course focused on p5.js, HTML/CSS, creative coding, web design, and game design through a critical lens.

Graphic Design Intern

01/2023 – 04/2023

United Nations

- Initiated the visual identity (VI) redesign for the prestigious Journal of the United Nations based on the needs, enhancing the publication's visual and communicative impact.
- Established a cohesive set of style guides, design documents and templates to streamline the production process.
- Conceptualized and executed the design of the Journal portal website in SharePoint, improving content accessibility and stakeholder collaboration among the departments.
- Collaborated with other designer and employed Power BI to visualize complex data sets, producing interactive dashboards that offer insightful and user-friendly data interpretation.
- Successfully led the technical migration of the NADI site from WordPress to SharePoint, ensuring a seamless transition without compromising content integrity or user experience.
